EKITI STATE UNIVERSITY ANTHEM

Verse 1

Hail! Hail!! Ekiti State University,
This lofty vision, which our fathers bore
Blessed be thy diligence
Mustered by great dedication and passion
For Knowledge, Honour and Service.

Chorus

EKSU! EKSU!! EKSU!!!
Shine in all spheres,
I say shine,
The goal is clear,

To birth the best brains,
For strength that builds our Nation.

Verse 2

Hail! Hail!! Ekiti State University,
The fountain from which we all draw with joy,
We acknowledge God and His Grace,
For our institution fostered with learning and culture,
Great may you remain forever and ever

Chorus

EKSU! EKSU!! EKSU!!!
Shine in all spheres,
I say shine,
The goal is clear,
To birth the best brains,
For strength that builds our Nation.

CGPA CALCULATION @EASE of 5.00 Grading System.

GRADE
5 = A
4 = B
3 = C
2 = D
1 = E
0 = F
.....
SCORE
1. 70-100 = A
2. 60-69 = B
3. 50-59 = C
4. 45-49 = D
5. 40-44 = E
6. 0-39 = F
.....
So:
1. 4.50 - 5.00 = First Class
2. 3.50 - 4.49 = 2nd Class Upper
3. 2.40 - 3.49 = 2nd Class Lower
4. 1.50 - 2.39 = 3rd Class
5. 1.0 - 1.49 = Pass
.....
WHAT IS CGPA & GPA??
CGPA - Cumulative Grade Point Average. (This is what you have after both 1st and 2nd semester .... In summation and Division, amounting to it)
GPA - Grade Point Average (This is what you have after every semester)
C.U - Credit Units
TCU - Total Credit Unit
G.P - Grade Point
TGP or TQP - Total Grade Point or Quality Point

Thus;
GPA ..... This is derived by dividing the Total Grade/Quality point (TQP/TGP) by the Total Credit unit (TCU) for that semester.
For example:
If in a semester, a student earned 90 quality points for 21 credit units, the GPA will be;
GPA = TGP/TCU
90/21
= 4.28

HOW TO CALCULATE CGPA:
CGPA is derived by adding the Total Quality Points (TQP) for all the semesters to date and dividing by the Total Credit Units to date for all semester... 1st & 2nd.
For example:
If in a semester a student earns a QP of 90 for 21 CU in the first semester and earns a QP of 87 for 20 CU in the second semester, his/her CGPA will be;
CGPA = TQP/TCU
= (90+87) / (21+20)
= 177 / 41
= 4.31

Your CGPA for that session will be, CGPA = 4.31
..... Breaking it Down:
√ Let's Consider a 1st Semester Result as shown below;

S/n	Units.	Grade	G.P
1.	3	× (A) 5	= 15
2.	2	× (B) 4	= 8
3.	2	× (A) 5	= 10
4.	3	× (A) 5	= 15
5.	3	× (C) 3	= 9
6.	3	× (D) 2	= 6
7.	2	× (E) 1.	= 2
	TCU=18		TGP= 65

GPA = TGP/TCU
= 65/18
= 3.61

√√ Let us now consider 2nd Semester Result.
NB: We'd carry out same procedure in 1st semester then apply here.
But let's assume our TCU & TGP to be = 20 and = 93 respectively.
GPA for second semester GPA = TGP/TCU
93/20
= 4.65

.....
√√√ You'll add first semester and second semester together to get CGPA. AS As shown below;
Mathematically;
CGPA = TGP+TGP(1st & 2nd semester) / TCU+TCU(1st & 2nd Semester)
CGPA = 65+94/ 18+20
= 159 / 38
= 4.184210

NB: **Always approximate your point to 2 decimal places.**
Thus: Your main CGPA = 4.18

CHM 102 TEST

1. One of the breakthrough in Organic Chemistry is the Friedrich Wholer discovery by synthesizing Urea from Ammonium Cyanate by simple heating.
   a. Represent above statement using chemical equation
   b. What year was this Chemist discovered this breakthrough
   c. List three (3) importance of this discovery
2. Use Dodecane to illustrate Catenation ability of Carbon
3. A polycyclic aromatic compound Y was found to contain 22 g/mole of hydrogen per molecule. Calculate
   a. Number of Carbon atoms in compound Y
   b. Number of rings in compound Y
   c. Molecular weight of compound Y
   d. Draw the structure of compound Y
   e. Calculate the DBE in compound Y
4. How can the following pairs of isomers be differentiated using spectroscopic methods
   a. Hexanone and Hexanal
   b. Hex-1,3-diene and Hex-2,5-diene
   c. 1,3-dimethyl benzene and 1,4-dimethyl benzene
5. Describe briefly how solid Iodine can be separated from talc powder
6. Consider the Table below

s/n	Substance	Boiling Point (^{0}C)
1	A	62
2	B	73
3	C	85
4	D	96
5	E	107

   a. State the best method of separating the mixture of A-E
   b. State two principle of a. above
   c. State the suitable method of separating mixture of A and D only
   d. Give the physical state of A - E
7. Calculate the DBE in the following Organic compounds
   a. 3-propyl, 4'-methyl bicyclohexane
   b. Nitrobenzene
   c. Undecane
   d. 2,3,4,4,4-pentamethyl Nonane
   e. Petroleum
8. State second law of Vitalism
9. Briefly describe three (3) types of hybridization exhibited by Hydrocarbons
10. List five (5) importance of Organic Compounds
11. Complete the table below

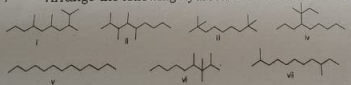

No. of Carbon	Alkyl	Alkane	Alkene	Alkyne
1				
2				
3				
4				
5

12. Write the ordinary structural formula of each of the following compounds
    a. 4-ethyl, 3,4,4-trimethylNonane
    b. 3-Phenyl propanol
    c. 4-Choloro Hexanol
    d. 3-methyl Octan-2,3,3,4-tetraol
    e. Bicyclomethane
13. Write the general molecular formula for the following functional groups
    a. Amine
    b. Alkanal
    c. Alkanoate
    d. Ether
    e. Amides
14. An organic compound X with empirical formula $(CH2)_3O$ was found to contain molecular weight of 116 g/mole
    a. Calculate the molecular weight of X
    b. Calculate the DBE in X
    c. Write out five isomers of X and list out the functional group(s) in each case
15. Write a general equation for the combustion of saturated hydrocarbon
16. A saturated hydrocarbon X was found to produce 396 g/mole of Carbon (IV) Oxide when completely burn in excess of oxygen. Determine
    a. IUPAC name of X
    b. Balance the equation
    c. Amount of steam produced
17. Arrange the following hydrocarbons in order of decreasing boiling point

18. Give IUPAC name for the following organic compounds

19. Write the complete equation of photochemical reaction between a compound with the general molecular formula C_nH_{2n+2} (when n = 1) and 6 atoms of Bromine in the presence of diffuse light

20. State the type of alkyl halides needed for the production of alkanes through reduction of alkylhalides in the presence of the following reagents
   a. Ph_3SnH
   b. $LiAlH_4$
   c. $NaBH_4$

21. State Markonikoff's rule

22. Predict the products formed from the following organic compounds when they react with HBr
   a.  b.  c.  d. 

23. State one limitation of Kolbe electrolytic method of synthesizing alkanes

24. Use chemical structure to indicate the following
   a. Terminal alkyne
   b. Internal alkyne
   c. Symmetrical reagent
   d. Unsymmetrical alkene
   e. Conjugated dienes
   f. Cumulated dienes
   g. Isolated dienes
   h. Diborane
   i. Unsymmetrical reagent
