EKITI STATE UNIVERSITY, ADO-EKITI
FACULTY OF SCIENCE
DEPARTMENT OF ZOOLOGY AND ENVIRONMENTAL BIOLOGY
SECOND SEMESTER EXAMINATION, 2019/2020 ACADEMIC SESSION
COURSE TITLE: GENERAL BIOLOGY II 3 UNITS
COURSE CODE: BIO 102 TIME ALLOWED: 2HOURS

Instruction (s): Answer all questions.

1. The reproductive structure of Fungi is also known as.....
2. Mention **THREE** Fungi dramatic size, shape and compact structures
3. In what forms do Fungi store carbohydrate? glycogen
4. Mention **ONE** example for each of unicellular and multicellular Fungi Yeast macro-fungi
5. State **TWO** bases on which Fungi can be classified Growth form, reproductive spore
6. What division do Algae belong? Thallophyta
7. Algae that grow in the tissue of plants are known as ..... thallus
8. Mention **TWO** industrial uses of Algae
9. The Sphenophyta division contains only one living genus called..... equisetum
10. Mention **ONE** example of aquatic fern you know Salvinia
11. The prothallus in fern produce group of highly differentiated reproductive organs called .....antheridia..... and .....archegonia.....
12. Mention any **TWO** characteristics of Spermatophyta
13. List **TWO** differences between gymnosperm and higher cryptogams presence of cambium & ovul
14. The essential or reproductive whorls of flowers are .....Androecium.....and .....gynoecium.....
15. List **THREE** factors that favour self-pollination in flower
16. Classify mosses based on absorption/water requirement Endohydric, Ectohydric, Mixohydric
17. Mention TWO importance of bryophyte anti tumor & cancer
18. Based on the habit, mosses can be grouped into divisions namely.....Acrocarpous and Pleurocarpous
19. Sexual reproduction in Paramecium is by ..... Conjugation
20. In which part of Euglena does flagellum arise from? Blepharoplast
21. Why is the body shape of Paramecium constant unlike Amoeba that is shapeless? pellicle
22. Porifera is at .....cellular.....level of organization.
23. State functions of Nematocyst in Cnidarians food capture, Defence
24. The triploblastic animals in which the mesoderm is split into two (2) layers separated by coelom are generally called ..Coelomate animal.....
25. In coelomates, the inner layer of mesoderm surrounding the gut is called..Splanchnic.... while the outer layer is .....Somatic.....
26. .....mantle..... secretes the shell of molluscs
27. The bodies of cestodes are flattened and divided into segments known as .....proglottides.....
28. The unsegmented roundworms belong to the phylum .....Nematoda.....
29. Craniata are animals with .....Head.....
30. List two of the major characteristics that distinguish Chordates from other animals presence of notochord
31. Fish detect vibrations in water using .....lateral line.....
32. Mention two adaptations to terrestrial life in reptiles
33. What is the relationship between the length of furs in mammals and environmental conditions
34. Mention the different types of feathers in birds quill, down, filoplumes, covert
35. What are the functions of the oil gland in birds? to supply oil for keeping the feathers glossy and water proof and prevent the bill from becoming brittle
