EKITI STATE UNIVERSITY, FACULTY OFSCIENCE
DEPT OF ZOOL AND ENV BIOL & DEPT OF PLANT SC AND BIOTECH
SECOND SEMESTER, 2018/201 SESSIONS
B.SC. DEGREE EXAMINATION

COURSE CODE: BIO 102
COURSE TITLE: ANIMAL DIVERSITY TIME ALLOWED: 1 1/2HRS

INSTRUCTION: Answer All Questions

1. Mention THREE general characteristics of Spermatophytes
2. List TWO features that make gymnosperms resemble higher cryptogams
3. A flower without calyx and corolla is described as being ----------
4. Mention TWO strategies that favour self pollination
5. List FOUR adaptive features of anemophilous flowers
6. What do you understand by the term (i) Isogametes (ii) Heterogametes
7. State the THREE ways at which the separation of algae into the various divisions could be largely determined
8. Name the conditions at which the life cycle of algae are studied
9. State THREE importance of Algae
10. In what form do fungi feed and store excess carbohydrate?
11. Give an example of unicellular, filamentous and micro fungi
12. On what basis can fungi be classified?
13. State THREE characteristics of pteridophytes
14. Moses that get their water supply by absorption through the stem and leaves are called ---------
15. Mention THREE characteristics of Bryophytes
16. The gametophyte of ferns is also referred to as ----------
17. The inner layer of mesoderm surrounding the gut in coelomates is known as ----------
18. State THREE importance of Earthworms
19. What is Torsion?
20. State THREE characteristics of Annelida
21. Enumerate FOUR general characteristics of Crustaceans
22. List THREE advantages of body cavity in coelomate animals.
23. The unsegmented roundworms belong to phylum ----------
24. Give TWO examples of scales in fishes
25. Craniata are animals with ----------
26. List TWO major characters of chordates
27. Cephalochordata is found under phylum Chordata. True or False?
28. Fish detect vibrations in water using the ----------
29. The webbed hind toes of amphibians are used for what?
30. Using eye contact lens glasses can expose one to infections from worms in the phylum ----------
31. List the THREE phyla of Sub-kingdom Protozoa
32. The locomotory organ in class sarcodina is --Pseudopodia
33. State the functions of plasma membrane in protozoans
34. The presence of --pellicle-- in flagellates gives a definite shape to the organism
35. What is the type of symmetry found in Cnidarians? They are primarily radially symmetrical
36. State TWO functions of nematocyst.
37. State TWO reasons why Ctenophores are considered higher in organization than the Cnidarians.
38. Why are sponges known as pore – bearing animals?

EKITI STATE UNIVERSITY, ADO-EKITI
FACULTY OF SCIENCE
DEPARTMENT OF ZOOLOGY AND ENVIRONMENTAL BIOLOGY
SECOND SEMESTER EXAMINATION 2015/2016 SESSION

COURSE TITLE: GENERAL BIOLOGY II
COURSE CODE: BIO 102

Time allowed: 1½ HRS

Instruction: Answer ALL questions.

1. State another names respectively for Ascomycotina, Phycomycotina, Basidiomycotina and Deuteromycotina
2. In what form does a typical fungus store its excess carbohydrate?
3. State THREE (3) divisious of Algae apart from the division Chlorophyta.
4. Mention FOUR (4) Orders under the division Chlorophyta.
5. In Algae, gametes that are similar in size, behaviour and structure are called.
6. The fusion or conjugation of Isogametes is called
7. State TWO features affecting sexual reproduction in Algae
8. Name the structure of locomotion in Chlamydomonas.
9. A plant bearing both male and female flowers is said to be
10. Highlight the FOUR (4) steps involved in the process of conjugation in Spirogyra.
11. Angiosperms possess well-developed vascular system whic! consists of ..... and .....
12. The root which is modified for gaseous exchauge is called.
13. How does a Reptile reduced evaporation of water?
14. List THREE (3) Phyla of protozoa
15. State TWO (2) external features of the Class Sarcodina.
16. Name TWO (2) species of parasitic Amoeba, ... and .....
17. List TWO (2) Nematodes of medical importance.
18. What is metameric segmentation?
19. Why is Opalina regarded as a Flagellate and not a Ciliate?
20. What is the lateral line of fish used for?
21. Jawless animals belong to the group known as....
22. The Class Asteroidea (Starfish) belongs to the Phylum.
23. Chordates are noted for the possession of notochord in their embryonic stage.
24. The scientific name for bony fishes is.

FACULTY OF SCIENCE
DEPARTMENT OF ZOOLOGY
SECOND SEMESTER 2010/2011 EXAMINATION

Course Code: BIO 102
Course Title: GENERAL BIOLOGY II **Time allowed: 2 HRS**

Instruction: Answer ALL questions

1a. State 4 characteristics of Bryophytes.
b. Mention 2 kinds of branches produced by Protonema
2. Name **FOUR** types of scales found in fishes and give example of specific fish species where each scale is found.
3. Mention any **THREE** diagnostic features of Protozoa.
4(i). What is Torsion? (ii) Mention one major problem created by torsion in Molluscs
5. What is Coelom? (ii) Mention **TWO** advances shown by Nematodes over Platyhelminthes.
6. What are the **THREE** morphological features first seen in Flatworms?
7. In tabular form describe the features of the 3 classes of Annelida based on the following: (a) Habitat (b) Mode of life (c) Parapodia (d) Named example.
8a. State 3 differences between gymnosperms and angiosperms
b. What are the features that make gymnosperms resemble the higher cryptogams?
9a. Why are Pteridophytes termed vascular plants? because they possess
b. The single unbranched vein of *Lycopodium* leaf is termed what?
c. Mention the name of the fern plant you studied in the laboratory and give the name of its dark brown structures found under the leaf surfaces of the plant.
10. State **TWO** important features that link Molluscs with the Annelids
11. Mention 5 major important algae
12. List the functions of the following organelles (i) Pseudopodia (ii) Cilia (iii) Flagellum (iv) Pellicle
13. List 3 adaptive features of plants, pollinated by wind.
b. Itemize 3 attributes that ensure allogamy.
14a. State 3 of the non-biotic means of virus transmission.
b. Mention the 3 cell shapes of Bacteria.
15. Highlight 4 general features of Amphibian.
16. What are the functions of the following organelles in a named p
(i) Nostril (ii) Operculum.

I STATE UNIVERSITY, ADO-EKITI
FACULTY OF SCIENCE
DEPARTMENT OF ZOOLOGY
SECOND SEMESTER 2011/2012 EXAMINATION

Course Code: BIO 102
Course Title: GENERAL BIOLOGY II
Time allowed: 2 HRS

Instruction: Answer ALL questions

1(a) State Three features that differentiate Angiosperms from Gymnosperms.
(b) Mention TWO features of Anemiophily pollination.
(c) Enumerate FOUR features that differentiate Gymnosperms from Cryptogams.
2(a) State 4 characteristics of Pteridophytes.
(b) Mention TWO structures that make the Pteridophyte a vascular plant.
(c) Name the female and male reproductive gametes in Fern.
3(a) State FOUR epidemiological clarifications of Viruses.
(b) State TWO importance of Bacteria
4 What are the FOUR reproducing groups of Fungi?
5(a) State FIVE major divisions of the Algae.
(b) State FIVE economic importance of Algae
6 Mention THREE classes of Bryophytes.
7(a) Define the term Metamerism.
(b) State THREE advantages of coelomic fluid in Annelid.
8(a) List FOUR adaptive features of the pore-bearing animals.
(b) *Leucosolenia spp, Grantia spp, Cliona spp* and *Hyalonema spp* are Poriferens. state the class of each of these organisms.
9(a) List FIVE diagnostic features of the phylum Annelida.
(b) Give TWO differences between the Polyploid and Medusoid forms of Cnidarians.
10 Give the Scientific names of THREE nematodes of medical importance and the diseases caused by each.
11 State the functions of any THREE of the structures in the body of a typical fish.
12 List THREE adaptations of fish to their environment.
13(a) List FOUR characteristics of Amphibian
(b) What does the word Amphibia imply?
(c) Mention TWO adaptive features of Amphibians to water and land.
14(a) List the FOUR Orders of Reptiles.
(b) List THREE characteristics of Reptiles
(c) Mention TWO adaptations of Reptiles to their environment
15(a) Mention a feature that distinguishes birds from other vertebrates.
(b) Mention the FOUR types of feathers.
(c) Mention TWO adaptations of birds to their mode of living

EKITI STATE UNIVERSITY, ADO EKITI, FACULTY OF SCIENCE
DEPARTMENT OF PLANT SCIENCE & BIOTHECNOLOGY AND
DEPARTMENT OF ZOOLOGY & ENVIRONMENTAL BIOLOGY
SECOND SEMESTER, 2017/2018 SESSION
B.SC. DEGREE EXAMINATION

COURSE CODE: BIO 102
COURSE TITLE: Introduction to Animal Diversity
INSTRUCTION: ANSWER ALL QUESTIONS

Time allowed: 1½ Hrs

1. State FIVE major divisions of algae ① Chlorophyta ② Euglenophyta ③ Pyrrophyta ④ Chrysophyta ⑤ Phaeophyta ⑥ Cyanophyta ⑦ Rhodophyta (red)
2. Give ONE example of prokaryotic algae – blue green algae
3. Identify and describe TWO types of flagella in Algae whiplash flagella (longer, smooth), Flimmer flagella (shorter, coarse, numerous)
4. Identify TWO characteristics of the division Chlorophyta
5. Identify TWO beneficial effects of Fungi some fungi produce gallic acid (dyes, black ink), some fungi are eaten as food (yeast)
6. Mention TWO types of arrangements of lateral leaves in Bryophyte – spirally arranged
7. Mosses that get their water supply by absorption through the stem and leaves are called Ectohydric
8. State THREE differences between Acrocarpous and Pleurocarpous Mosses
9. State TWO characteristics of Pteridophytes
10. The gametophyte of Ferns is also referred to as prothallus
11. What separates fungal nucleus and nucleoli from the cytoplasm? Nuclear Membrane
12. State THREE various forms of existence of Fungi in term of nutrition. – Yeasts, moulds, macrofungi
13. In terms of cellular arrangement and growth form, differentiate between Yeast and Mould
14. List THREE general characteristics of Spermatophytes
15. A plant bearing both male and female flowers is said to be monoecious
16. State THREE factors that favours cross pollination (1) Entomophily (2) anemophily (3) hydrophily.
17. Mention THREE adaptive features of anemophilous flower.
18. An example of unsegmented Roundworm that is common in rain is
19. The Phylum Chordata consists of TWO major divisions (a) (b)
20. ONE of the main features that distinguishes Chordates from other animals is
21. Respiration in all stages of Amphibian development involve the use of (a) Gill (b) lungs (c) Skin
22. List the FOUR Classes of Tetrapods. Amphibia, Aves, Reptilia, Mammalia
23. Mention TWO major functions of nucleus as an organelle in the cell of Amoeba.
24. The main opening at the top of the sac-like structure of Sponges is called what? Osculum
25. State TWO functions of the Nematocyste of Cnidarians. defence and food capture
26. List the THREE Phyla of sub-kingdom Protozoa. Sarcomastigophora, Ciliophora, Apicomplexa
27. Zoomastigophora lacks chloroplast, it therefore exhibits what form of feeding? Holozoic, Saprophytic
28. What type of egg is produce by *Agama agama* Amniotic
29. Mention TWO advancements of Reptiles over Amphibians. Presence of skeletal system for dry scaly integument suitable for life
30. List TWO features that Birds share with Reptiles. laying of eggs with shells
31. State TWO ways of producing non-vocal sound in birds – clamping bills together, stamping feet
32. What is the advantage of long neck in lizards? It enables it lizard to move it's head independent of its body so that it can watch its prey without moving
33. State TWO detrimental roles played by Molluscs.
34. What is "Ecdysis" and why is it necessary in Arthropods?
35. Define the term "Torsion"

34) Ecdysis is the moulting of a cuticle in many invertebrates of the phylum Arthropoda, followed by growth. Shedding off of exoskeleton necessary for growth.

35) Torsion is the rotation of the visceral mass, mantle and shell 180° with respect to the head and foot of the gastropods.

33) – Immediate uses for fungi that parasitize fungi and animals.
– are pests on farms and gardens.

EKITI STATE UNIVERSITY, ADO-EKITI
FACULTY OF SCIENCE
DEPARTMENT OF ZOOLOGY
SECOND SEMESTER EXAMINATION 2014/2015 SESSION

COURSE TITLE: GENERAL BIOLOGY II
COURSE CODE: BIO 102 Time allowed: 1H 15 min.

Instruction: Answer ALL questions

1. The three phyla of sub-kingdom Protozoa are Sarcomastigophora and Ciliophora & Apicomplexa
2. The phyla of Protozoa are classified chiefly by their locomotion
3. State two functions of the nucleus in the cell — it is responsible for protein synthesis, cell-div and it controls heredity / stores hereditary materials
4. The mode of feeding in Zooflagellates is heterotrophic
5. The gametes for sexual reproduction in Algae are produced in the gametangia
6. The fusion of conjugation of isogametes is called Isogamy
7. State five divisions of Algae Chlorophyta, Euglenophyta, Phaeophyta, Rhodophyta, Chrysophyta, Cyanophyta,
8. Those Algae whose nuclear materials are not enclosed in membraneous envelope are called Prokaryotic algae
9. State the two broad Classes of flagella in Algae — Whiplash and plumed
10. The flagellum of *Euglena viridis* arises from: Blepharoplast
11. Asexual reproduction is by binary fission in Amoeboid protozoas while in Ciliates it is by transverse fission
12. The main opening at the top of a Sponge is called osculum while the body wall cells are referred to as ——
13. Primarily a group of chordates called Agnatha are under the division Orthostomata
14. Mention five characteristics under the division Chlorophyta
15. State the four steps involved in sexual reproduction in Spirogyra.
16. State two factors affecting sexual reproduction in Spirogyra.
17. Mention two pigments present in the division Rhodophyta — phycoerythrin, phycocyanin
18. Name the structure for locomotion in Chlamydomonas. flagella
19. The two functions of nematocysts in Cnidarians are for defence and for food capture
20. The phylum Ctenophora takes its name from the eight rows of comb like plates they studded with rows of fused cilia for locomotion
21. What is radula? Radula is a belt-like structure lying on the floor of the buccal cavity for feeding
22. The function of the lateral line in fish is to ——— vibration in water
23. Mention three Classes of the Pteridophytes giving one example each
24. The male and female gametes borne by the prothallus in a Fern plant are called Antheridia (male) and ——— respectively. Archegonia (female)
25. Mention the constituents of the structure of the sporophyte of *Lecanora* — A foot, seta, capsule
26. State any three characteristics of Spermatophytes.
27. Amphibians do not have constant body temperature, therefore they are said to be poikilothermic
28. State three importance of Earthworms.
29. Name one Class under the phylum Rotifera — Rotaria seisonidea
30. Compound eyes are unique to the phylum Arthropoda
31. The inner layer of mesoderm surrounding the gut in the Coelomates is known as splanchnic mesoderm
32. What is the main function of the queen bee? To give birth to young ones
33. Mention any three features that make gymnosperms resemble the higher cryptogams
    (a) they are parallel & close to each other (b) they have well developed vascular system
    (c) they do not require water for fertilization to the female cell

(1) (a) Regular alternation of generation (b) Differentiation of gametangia (c) Presence of vessels
(2) (a) Volvocales (b) Tetrasporales (c) Cladophorales (d) Ulvales (e) Ulotrichales
(3) Psilophyta – psilotum
Lycophyta – lycopodium
