BIO 102

Question 1:

Name the type of organism that lacks true roots, stems, and leaves.

A) Algae

B) Fungi

C) Bryophytes

D) Spermatophytes

Answer: C) Bryophytes

Explanation: Bryophytes, including mosses and liverworts, are non-vascular plants that lack true roots, stems, and leaves.

@Twitter@Mts_PHM

Question 2:

What is the primary mode of nutrition in fungi?

A) Autotrophic

B) Heterotrophic

C) Mixotrophic

D) Parasitic

Answer: B) Heterotrophic

Explanation: Fungi are heterotrophic organisms that obtain nutrients by absorbing organic matter from their environment.

Question 3:

Name the phylum that includes organisms like mushrooms, yeasts, and molds.

A) Porifera

B) Cnidaria

C) Mollusca

D) Fungi

Answer: D) Fungi

Explanation: The phylum Fungi consists of diverse organisms, including mushrooms, yeasts, and molds.

Question 4:

Which phylum of plants reproduces via spores instead of seeds?

A) Bryophyta

B) Pteridophyta

C) Coniferophyta

D) Anthophyta

Answer: B) Pteridophyta

@Twitter@Mts_PHM

Answer: B) Pteridophyta

Explanation: Pteridophytes, such as ferns and horsetails, reproduce via spores rather than seeds.

Question 5:

What is the basic structural unit of a virus?

A) Cell

B) Tissue

C) Organ

D) Nucleic acid surrounded by a protein coat

Answer: D) Nucleic acid surrounded by a protein coat

Explanation: Viruses consist of a nucleic acid core (either DNA or RNA) surrounded by a protein coat, known as a capsid.

Question 6:

Which group of organisms are single-celled eukaryotes?

A) Algae

B) Protozoa

C) Bacteria

D) Viruses

Answer: B) Protozoa

Explanation: Protozoa are single-celled eukaryotic organisms that belong to the kingdom Protista.

Question 7:

Which phylum of animals includes organisms like sponges?

A) Porifera

B) Cnidaria

C) Annelida

D) Mollusca

Answer: A) Porifera

Explanation: The phylum Porifera consists of organisms commonly known as sponges.

Question 8:

Name the phylum that includes animals with stinging cells, such as jellyfish.

A) Porifera

B) Cnidaria

C) Annelida

Name the phylum that includes animals with stinging cells, such as jellyfish.

A) Porifera

B) Cnidaria

C) Annelida

D) Arthropoda

Answer: B) Cnidaria

Explanation: Cnidaria is the phylum that includes animals like jellyfish and coral, which possess specialized cells called cnidocytes that contain stinging structures.

Question 9:

Which phylum of animals are characterized by a body cavity called a coelom?

A) Cnidaria

B) Annelida

C) Mollusca

D) Arthropoda

Answer: B) Annelida

Explanation: Annelida is the phylum of animals that have a true coelom, which is a fluid-filled body cavity surrounded by mesoderm tissue.

Question 10:

What phylum includes organisms like snails, clams, and octopuses?

A) Porifera

B) Cnidaria

C) Mollusca

D) Arthropoda

Answer: C) Mollusca

Explanation: The phylum Mollusca consists of diverse organisms such as snails, clams, squids, and octopuses.

Question 11:

Which phylum includes animals with jointed appendages and exoskeletons?

A) Porifera

B) Cnidaria

C) Mollusca

D) Arthropoda

Answer: D) Arthropoda

Explanation: Arthropods, such as insects, crustaceans, and spiders, possess jointed appendages and exoskeletons, which provide support and protection.

Question 12:

©Twitter@Mts_PHM

Question 12:

What is the phylum of flatworms, which includes organisms like planarians and tapeworms?

A) Annelida

B) Mollusca

C) Platyhelminthes

D) Nematoda

Answer: C) Platyhelminthes

Explanation: Platyhelminthes is the phylum that comprises flatworms, which exhibit a flattened body shape and include organisms like planarians and tapeworms.

Question 13:

Which phylum includes organisms like rotifers, which are small, multicellular animals with a crown of cilia at the anterior end?

A) Nematoda

B) Platyhelminthes

C) Rotifera

D) Acanthocephala

Answer: C) Rotifera

Explanation: Rotifera is the phylum that consists of small, multicellular animals called rotifers, which possess a crown of cilia (called a corona) at the anterior end.

Question 14:

Name the phylum that includes roundworms, which are non-segmented, cylindrical animals with a protective cuticle.

A) Annelida

B) Nematoda

C) Rotifera

D) Acanthocephala

Answer: B) Nematoda

Explanation: Nematoda is the phylum that encompasses roundworms, which are non-segmented, cylindrical animals with a protective cuticle.

Question 15:

Which phylum includes parasites like thorny-headed worms that infect the digestive tracts of

vertebrates?

A) Nematoda

B) Platyhelminthes

C) Acanthocephala

D) Chordata

Answer: C) Acanthocephala

Explanation: Acanthocephala is the phylum that includes parasites like thorny-headed worms, which infect the digestive tracts of vertebrates.

Question 16:

What is the defining characteristic of chordates?

A) Presence of a notochord

B) Exoskeleton

C) Absence of a coelom

D) Radial symmetry

©Twitter@Mts_PHM

Answer: A) Presence of a notochord

Explanation: Chordates are characterized by the presence of a notochord, a flexible rod-like structure that provides support and serves as a precursor to the spinal column.

Question 17:

Which group of vertebrates includes animals like sharks, rays, and skates?

A) Pisces

B) Amphibia

C) Reptilia

D) Aves

Answer: A) Pisces

Explanation: Pisces is the group of vertebrates that comprises fish, including sharks, rays, and skates.

Question 18:

Name the class of vertebrates that includes frogs, toads, and salamanders.

A) Pisces

B) Amphibia

C) Reptilia

D) Aves

©Twitter@Mts_PHM

Answer: B) Amphibia

Explanation: Amphibia is the class of vertebrates that includes frogs, toads, and salamanders. These animals typically have an aquatic larval stage and a terrestrial adult stage.

Question 19:

Which group of animals is characterized by scaly skin, amniotic eggs, and ectothermic metabolism?

A) Pisces

B) Amphibia

C) Reptilia

D) Aves

Answer: C) Reptilia

Explanation: Reptiles, such as snakes, turtles, and lizards, possess scaly skin, lay amniotic eggs,

Answer: C) Reptilia

Explanation: Reptiles, such as snakes, turtles, and lizards, possess scaly skin, lay amniotic eggs,

and rely on external sources of heat to regulate their body temperature (ectothermic metabolism).

Question 20:

Name the class of vertebrates that includes birds.

A) Pisces

B) Amphibia

C) Reptilia

D) Aves

Answer: D) Aves

Explanation: Aves is the class of vertebrates that includes birds. Birds are characterized by features like feathers, beaks, and the ability to fly.

© Twitter@Mts_PHM

Question 21:

Which group of animals is characterized by mammary glands and hair/fur?

A) Pisces

B) Amphibia

C) Reptilia

D) Mammalia

Answer: D) Mammalia

Explanation: Mammalia is the group of animals that possesses mammary glands, which produce milk for nourishing their young, as well as hair or fur that helps to regulate body temperature.

Question 22:

Name the phylum that includes animals with simple bodies, segmented muscles, and a notochord throughout their lifetime.

A) Porifera

B) Cnidaria

C) Annelida

D) Chordata

Answer: D) Chordata

Explanation: Chordata is the phylum that includes animals with a notochord, such as fish, amphibians, reptiles, birds, and mammals. Chordates also exhibit segmented muscles.

Question 23:

What is the largest phylum in the animal kingdom, known for its jointed appendages and

Question 23:

What is the largest phylum in the animal kingdom, known for its jointed appendages and segmented bodies?

A) Porifera

B) Cnidaria

C) Arthropoda

D) Chordata

Answer: C) Arthropoda

Explanation: Arthropoda is the largest phylum in the animal kingdom, characterized by jointed appendages, segmented bodies, and a hard exoskeleton.

Question 24:

Which phylum includes animals with a water vascular system and tube feet?

A) Porifera

B) Cnidaria

C) Echinodermata

D) Chordata

Answer: C) Echinodermata

Explanation: Echinodermata is the phylum that includes animals such as starfish, sea urchins, and sea cucumbers, which possess a water vascular system and tube feet for locomotion and feeding.

Question 25:

What is the class of animals that includes animals with a notochord, hollow nerve cord, and pharyngeal slits?

A) Agnatha

B) Chondrichthyes

C) Osteichthyes

D) Amphibia

Answer: A) Agnatha

Explanation: Agnatha is the class of animals that includes jawless fish like lampreys and hagfish. They possess a notochord, hollow nerve cord, and pharyngeal slits.

Question 26:

Name the class of fish that includes cartilaginous fish like sharks and rays.

A) Agnatha

B) Chondrichthyes

C) Osteichthyes

D) Amphibia

Answer: B) Chondrichthyes

Explanation: Chondrichthyes is the class of fish that comprises cartilaginous fish, including sharks, rays, and skates. They have skeletons made of cartilage rather than bone.

Question 27:

Which class of fish possesses a bony skeleton and includes most of the familiar fish species?

A) Agnatha

B) Chondrichthyes

C) Osteichthyes

D) Amphibia

Answer: C) Osteichthyes

Explanation: Osteichthyes is the class of fish that possesses a bony skeleton and includes the majority of familiar fish species.

©Twitter@Mts_PHM

Question 28:

What is the class of animals that includes animals like frogs, toads, and salamanders?

A) Agnatha

B) Chondrichthyes

C) Osteichthyes

D) Amphibia

Answer: D) Amphibia

Explanation: Amphibia is the class of animals that includes amphibians like frogs, toads, and salamanders.

Question 29:

Name the group of reptiles characterized by having two pairs of limbs and scaly skin.

A) Lizards

B) Snakes

C) Turtles

D) Crocodiles

Answer: A) Lizards

Explanation: Lizards are a group of reptiles characterized by having two pairs of limbs, scaly skin, and the ability to regenerate their tails.

Question 30:

Which group of reptiles is known for its limblessness and elongated bodies?

A) Lizards

B) Snakes

C) Turtles

D) Crocodiles

©Twitter@Mts_PHM

Answer: B) Snakes

Explanation: Snakes are a group of reptiles that are known for their limblessness, elongated

Answer: B) Snakes

Explanation: Snakes are a group of reptiles that are known for their limblessness, elongated bodies, and unique modes of locomotion.

Question 31:

Name the group of reptiles that includes animals with a protective shell composed of bony plates or scales.

A) Lizards

B) Snakes

C) Turtles

D) Crocodiles

Answer: C) Turtles

Explanation: Turtles are a group of reptiles characterized by their protective shell, which is composed of bony plates or scales. They have a unique body structure that allows them to retract their head, limbs, and tail into the shell for protection.

Question 32:

Which group of reptiles is known for their long snouts, powerful jaws, and ability to live in both freshwater and saltwater habitats?

A) Lizards

B) Snakes

C) Turtles

D) Crocodiles

Twitter@Mts_PHM

Answer: D) Crocodiles

Explanation: Crocodiles are a group of reptiles known for their long snouts, powerful jaws, and ability to inhabit both freshwater and saltwater environments.

Question 33:

What is the class of animals that includes birds?

A) Aves

B) Reptilia

C) Amphibia

D) Mammalia

Answer: A) Aves

Explanation: Aves is the class of animals that includes birds. Birds are characterized by features such as feathers, beaks, wings, and the ability to fly.

Question 34:

Which group of animals is warm-blooded, possesses mammary glands, and exhibits diverse adaptations for various habitats?

A) Aves

Explanation: Aves is the class of animals that includes birds. Birds are characterized by features such as feathers, beaks, wings, and the ability to fly.

Question 34:

Which group of animals is warm-blooded, possesses mammary glands, and exhibits diverse adaptations for various habitats?

A) Aves

B) Reptilia

C) Amphibia

D) Mammalia

Answer: D) Mammalia

Explanation: Mammalia is the group of animals that is warm-blooded, possesses mammary glands for milk production, and exhibits diverse adaptations for different habitats, such as fur, hooves, and specialized teeth.

@Twitter@Mts_PHM

Question 35:

Name the subclass of mammals that includes animals like kangaroos, koalas, and opossums.

A) Monotremata

B) Marsupialia

C) Eutheria

D) Chiroptera

Answer: B) Marsupialia

Explanation: Marsupialia is the subclass of mammals that includes animals like kangaroos, koalas, and opossums. Marsupials give birth to relatively undeveloped young, which then continue to develop and nurse in a pouch on the mother's abdomen.

Question 36:

What is the subclass of mammals that includes animals like humans, dogs, and cats?

A) Monotremata

B) Marsupialia

C) Eutheria

D) Chiroptera

Answer: C) Eutheria

Explanation: Eutheria is the subclass of mammals that includes placental mammals like humans, dogs, and cats. Eutherians give birth to relatively well-developed young, nourished through a placenta during gestation.

@Twitter@Mts_PHM

Question 37:

Name the order of mammals that includes animals like bats.

A) Primates

B) Carnivora

C) Rodentia

D) Chiroptera

Answer: D) Chiroptera

Answer: D) Chiroptera

Explanation: Chiroptera is the order of mammals that includes bats. Bats are the only mammals capable of sustained flight.

Question 38:

Which order of mammals includes animals like dolphins, whales, and porpoises?

A) Primates

B) Carnivora

C) Cetacea

D) Chiroptera

Answer: C) Cetacea

Explanation: Cetacea is the order of mammals that includes aquatic animals like dolphins, whales, and porpoises. They are highly adapted for living in water, with streamlined bodies and specialized adaptations for swimming.

Question 39:

What is the order of mammals that includes animals like elephants, giraffes, and zebras?

A) Primates

B) Carnivora

C) Artiodactyla

D) Chiroptera

Answer: C) Artiodactyla

Explanation: Artiodactyla is the order of mammals that includes even-toed ungulates like elephants, giraffes, zebras, and numerous other hoofed animals. They have an even number of toes and are often herbivorous.

Question 40:

Name the order of mammals that includes animals like lions, tigers, and wolves.

A) Primates

B) Carnivora

C) Rodentia

D) Chiroptera

Answer: B) Carnivora

Explanation: Carnivora is the order of mammals that includes animals like lions, tigers, wolves, and other carnivorous species. They have adaptations for hunting and consuming other animals.

Question 41:

Which group of animals is characterized by having opposable thumbs, forward-facing eyes, and highly developed brains?

A) Primates

B) Carnivora

Question 41:

Which group of animals is characterized by having opposable thumbs, forward-facing eyes, and highly developed brains?

A) Primates

B) Carnivora

C) Rodentia

D) Chiroptera

Answer: A) Primates

Explanation: Primates are a group of mammals characterized by opposable thumbs, forward-facing eyes that provide depth perception, and highly developed brains. Humans, monkeys, and apes are examples of primates.

Question 42:

Name the order of mammals that includes animals like monkeys, apes, and humans.

A) Primates

B) Carnivora

C) Rodentia

D) Chiroptera

Answer: A) Primates

Explanation: Primates is the order of mammals that includes animals like monkeys, apes, and humans. Primates are known for their intelligence, complex social behaviors, and dexterity.

Question 43:

What is the order of mammals that includes animals like rats, mice, and squirrels?

A) Primates

B) Carnivora

C) Rodentia

D) Chiroptera

Answer: C) Rodentia

Explanation: Rodentia is the order of mammals that includes animals like rats, mice, squirrels, and beavers. They are characterized by continuously growing incisor teeth and a diverse range of ecological adaptations.

Question 44:

Which group of organisms is known for their ability to carry and transmit diseases to other organisms?

A) Bacteria

B) Viruses

C) Protozoa

D) Fungi

Answer: B) Viruses

Explanation: Viruses are known for their ability to infect and replicate within host cells, often causing diseases. They can be transmitted between organisms and are responsible for a wide range of illnesses.

Question 45:

What is the phylum of organisms that includes multicellular, eukaryotic organisms that lack cell walls and possess chloroplasts?

A) Porifera

B) Cnidaria

C) Plantae

D) Fungi

Answer: C) Plantae

Explanation: Plantae is the phylum of organisms that includes multicellular, eukaryotic organisms commonly known as plants. They lack cell walls and possess chloroplasts, enabling them to carry out photosynthesis.

@Twitter@Mts_PHM

Question 46:

Name the kingdom of organisms that includes unicellular eukaryotes with animal-like characteristics, such as locomotion and heterotrophic nutrition.

A) Monera

B) Protista

C) Fungi

D) Animalia

Answer: B) Protista

Explanation: Protista is the kingdom of organisms that includes unicellular eukaryotes with animal-like characteristics, such as the ability to move and obtain nutrients heterotrophically.

Question 47:

Which group of organisms includes fungi, which are eukaryotic, heterotrophic organisms with cell walls made of chitin?

A) Plantae

B) Animalia

C) Fungi

D) Protista

Answer: C) Fungi

Explanation: Fungi is the group of organisms that includes eukaryotic, heterotrophic organisms with cell walls made of chitin. They obtain nutrients by absorbing them from their surroundings.

Question 48:

What is the classification of organisms that are multicellular, heterotrophic, and lack cell walls?

A) Plantae

B) Animalia

C) Fungi

D) Protista

@Mts_PHM

A) Plantae

B) Animalia

C) Fungi

D) Protista

©Twitter@Mts_PHM

Answer: B) Animalia

Explanation: Animalia is the classification of organisms that are multicellular, heterotrophic, and lack cell walls. Animals obtain nutrients by consuming other organisms.

Question 49:

Which group of organisms includes the simplest multicellular animals that lack true tissues and organs?

A) Porifera

B) Cnidaria

C) Ctenophora

D) Coelomate Animals

Answer: A) Porifera

Explanation: Porifera is the group of organisms that includes the simplest multicellular animals, commonly known as sponges. They lack true tissues and organs and have specialized filter-feeding cells.

Question 50:

Name the phylum of organisms that includes jellyfish, corals, and sea anemones, characterized by specialized cells called cnidocytes.

A) Porifera

B) Cnidaria

C) Ctenophora

D) Coelomate Animals

©Twitter@Mts_PHM

Answer: B) Cnidaria

Explanation: Cnidaria is the phylum of organisms that includes jellyfish, corals, and sea anemones. They possess specialized cells called cnidocytes, which contain stinging structures called nematocysts.
