CHM 108 Practical Prep Questions With EKSU BRO
08155975073

1. State the differences between the following:

i. Precipitate and gelatinous precipitate.
ii. Concentrated and dilute acid solutions.
iii. Water and distilled water.
iv. Crystalline and amorphous solids.
v. Anion and cation.
vi. Melting and boiling points.
vii. Reagents and apparatus.
viii. Graduated and calibrated apparatus.
ix. Quantitative and qualitative analyses.
x. Organic and inorganic compounds.

——— COSMAS@EKSU-SU 01

2. Write out the confirmatory test for the following ions:

i. Nitrates.
ii. Sulphates.
iii. Nitrites.
iv. Chlorides.
v. Carbonates.

EKSU BRO

——— COSMAS@EKSU-SU TOPSEAT

3. Write out the anions and cations formed when the following compounds are ionized in water:

i. Silver nitrate.
ii. Lead nitrate.
iii. Lead sulphate.
iv. Copper(II) nitrate.

——— COSMAS@EKSU-SU 01

4. Give the confirmatory test for the following natural products/compounds:

i. Djenkolic acid.
ii. Starch.

iii. Cellulose.
iv. Oxalic acid.
v. Tartaric acid.

——— COSMAS@EKSU-SU TOPSEAT

5. List ten (10) equipment used during CHM 108 experiment.

——— COSMAS@EKSU-SU 01

6. What are the confirmatory tests for the identification of halogens?

SET TWO COSMAS@EKSU-SU 01

1. State the differences between the following:

i. Element and compound.
ii. Mixture and solution.
iii. Acid and base.
iv. Strong electrolyte and weak electrolyte.
v. Soluble salt and insoluble salt.
vi. Filtration and decantation.
vii. Oxidation and reduction.
viii. Accuracy and precision.
ix. Indicator and reagent.
x. Evaporation and crystallization.

——— COSMAS@EKSU-SU TOPSEAT

2. Write out the confirmatory tests for the following ions:

i. Sulphite (SO_3^{2-}).
ii. Phosphate (PO_4^{3-}).
iii. Ammonium (NH_4^+).
iv. Iron(III) (Fe^{3+}).
v. Copper(II) (Cu^{2+}).

——— COSMAS@EKSU-SU 01

3. Write out the anions and cations formed when the following compounds are ionized in water:

i. Sodium chloride (NaCl).
ii. Potassium nitrate (KNO_3).
iii. Copper(II) sulphate ($CuSO_4$).
iv. Calcium carbonate ($CaCO_3$).
v. Ammonium chloride (NH_4Cl).

——— COSMAS@EKSU-SU TOPSEAT

4. Give the confirmatory tests for the following compounds:

i. Glucose.
ii. Protein.
iii. Starch.
iv. Cellulose.
v. Oxalic acid.

——— COSMAS@EKSU-SU 01

5. List ten (10) apparatus used in CHM 108 practical and state one function of each.

——— COSMAS@EKSU-SU TOPSEAT

6. Explain the laboratory procedure for preparing a standard solution from a solid sample.

——— COSMAS@EKSU-SU TOPSEAT

7. State five laboratory safety rules observed during CHM 108 practical classes.

——— COSMAS@EKSU-SU 01

8. What are the confirmatory tests for the identification of the following halogens?

i. Chloride (Cl^-).
ii. Bromide (Br^-).
iii. Iodide (I^-).

——— COSMAS@EKSU-SU TOPSEAT

9. Differentiate between qualitative analysis and quantitative analysis, giving two

examples of each.

——— COSMAS@EKSU-SU 01

10. State the colour changes observed when the following indicators are added to acids and bases:

i. Litmus paper.
ii. Methyl orange.
iii. Phenolphthalein.
iv. Universal indicator.
